Hotel	Rooms	120	220	-	340
Light Industrial	Square Feet	150,000	150,000	-	300,000
Office	Square Feet	100,000	100,000	100,000	300,000
Hospital / Medical Office	Square Feet	50,000	150,000	175,000	375,000

# Notes:

- (1) Unused development rights from a particular phase carry over into the subsequent phase until build-out.
- (2) The Developer shall be permitted to convert between land uses based on the conversion table contained in the PUD-MU that allows for the exchange of land uses based upon trip generation for each land use.

The entire Property shall be subject to a PUD-MU district that will provide the land use controls for the distribution, location, densities, and intensities of permissible residential and non-residential development. Incremental development plans shall be submitted for individual portions of the 301 Villages in conjunction with corresponding construction plans. These plans must demonstrate consistency with the Conceptual Master Plan and compliance with all sections of the PUD-MU district subject to the City's PUD verification process.

In the event future development plans necessitate revising the Conceptual Master Plan, an amendment may be sought by the owner of the parcel which is the subject of the amendment but only with the written consent of the Master Developer of Record. Amendment to the adopted PUD-MU district may be accomplished through either an administrative modification, minor modification to the PUD, or by filing an application for rezoning as authorized by the PUD-MU or by Section 656.341 of the *Zoning Code*.

Conservation areas are shown as generalized areas on the Conceptual Master Plan and are subject to final design, road crossings, surveys and permitting. A key element of the Conceptual Master Plan is the preservation and enhancement of the Deep Creek Swamp and its tributaries. To protect water quality and preserve natural wetland functions, the Developer shall maintain a minimum fifteen (15) foot-wide upland buffer between developed areas contiguous to Category I and II Wetlands, except for those circumstances where an averaging of the buffer width, because of an unavoidable buffer reduction, achieves a greater overall upland buffer width.

The Developer shall provide a site within the Property to serve the water and sewer service needs of 301 Villages for potable water and wastewater. Centralized utilities for water and sewer service will be provided by a utility service system authorized by law. The projected water and wastewater demand are specified below. Prior to the commencement of Phase 1 development, the City shall amend its Water Supply Facilities Work Plan to identify phased facilities to provide water and wastewater service for 301 Villages.

		Non-Potable Water		Total
	Potable Water Demand (MGD)	(Irrigation) Demand (MGD)	Total Water Demand (MGD)	Wastewater Generation (MGD)
Phase 1	0.937	0.547	1.483	1.013
Phases 1 & 2	2.787	1.742	4.529	3.053
Build-out	4.017	2.441	6.458	4.369

To create a mobility-friendly community, the project's transportation network will accommodate the intensity and density of development that is interconnected through a network of pedestrian amenities and roadway network. The plan seeks to reduce the travel distance necessary for day-to-day activities. The plan consists of Villages, and a larger mix-use Village Center. Each Village will have multiple residential neighborhoods connected to one or more Neighborhood Centers that will support the Villages. The Villages will be linked to the Village Center by roadways and a pedestrian system consisting of sidewalks and multi-purpose paths. The major parkways(s) from US 301 will access all the Villages as well as the Village Center. The parkways(s) will include a multi-purpose pathway on one side with an extensive street tree and landscape treatment.

Coordination will continue with the FDOT and the City pursuit to the letter dated July 7, 2021 (attached). The Applicant conducted a traffic impact assessment dated September 2, 2021 (attached) of the existing and expected roadway operating conditions of the immediately surrounding transportation network for the Conceptual Master Plan. The methodologies and assumptions were agreed upon by the City and FDOT.

Coordination will continue with the FFWCC pursuit to the letter dated January 21, 2021 (attached) providing technical assistance information in the design of the Conceptual Master Plan and for future project planning.

RONDESANTIS GOVERNOR

2198 Edison Avenue MS 2806 Jacksonville, FL 32204-2730

KEVIN J. THIBAULT, P.E.

July 7, 2021

Kristen Reed, Chief Community Planning Division City of Jacksonville 214 North Hogan Street Edward Ball Building, Suite 300 Jacksonville, FL 32202

SUBJECT: City of Jacksonville Proposed Comprehensive Plan Amendment (20-16ESR)

Dear Ms. Reed,

Per your request, this letter serves as documentation that I did speak with Prosser, Inc regarding the traffic analysis requirements for the above-mentioned Comprehensive Plan Amendment. Per the City's standard procedures for the Mixed Use land use, within one year of adoption of L-5457-20A, a traffic impact assessment will be required and initiated as part of the conceptual master plan. The assessment will include analysis of existing and expected roadway operating conditions of the immediately surrounding transportation network impacted by the development outlined in the Detailed Conceptual Master Plan. The analysis will also include identification of the major internal transportation facilities necessary to serve the future land uses and how the major internal roadways will connect to the external transportation network. Identification of methodologies and assumptions shall be agreed upon by the City and FDOT and the analysis shall be completed within 3 years after it begins.

Thank you.

If you have any questions, please do not hesitate to contact me by email: brian.austin@dot.state.fl.us or call: (904) 360-5664.

Sincerely,

Brian Austin

Transportation Planner

Re: Duval-Jacksonville 20-16ESR (2020-598-E), Comprehensive Plan Amendment

Dear Ms. Reed:

Florida Fish and Wildlife Conservation Commission (FWC) staff reviewed the abovereferenced comprehensive plan amendment package and provides the following comments and recommendations for your consideration in accordance with Chapter 163.3184, Florida Statutes. While there are no objections to the amendment, the following technical assistance information is provided to assist the Department of Economic Opportunity, the County, and any applicants during the amendment review and future project planning.

### **Project Description**

This amendment would result in a change to the Future Land Use Map of the City of Jacksonville Comprehensive Plan wherein approximately 7,002 acres of lands currently designated as Agriculture-1, Agriculture-2, and Agriculture-3 will be designated as Multi-Use. This amendment would allow for a planned mixed-use development consisting of 11,250 single family residences, 3,750 multi-family residences, 340 rooms of hotel/lodging, 750,000 square feet of commercial, 300,000 square feet of office, 300,000 square feet of light industrial, and 375,000 square feet of hospital. The project area is located west of and adjacent to US 301 and approximately 1.3 miles south of the US 301 and I-10 interchange. The dominant land covers on the site consist of coniferous plantation (3,573.7 acres), mixed hardwood coniferous swamps (1, 018.2 acres), hydric pine flatwoods (917.3 acres), improved pasture (386.5 acres), field crops (314.1 acres), and mixed wetland hardwoods (284.2 acres).

### **Potentially Affected Resources**

A Listed Wildlife and Habitat Assessment Report (September 2020) by LG2 Environmental Solutions, Inc. was provided in support of the application. Following a review of online databases, general wildlife surveys were conducted on the project area on September 3-4, 2020, to assess the potential presence of listed and managed wildlife and their associated habitats. Field surveys confirmed the presence of the bald eagle (Haliaeetus leucocephalus) and Florida sandhill crane (Antigone canadensis pratensis, State Threatened [ST]) on-site. The potential for the following species was also addressed:

Kristen Reed Page 2 January 21, 2021

- Gopher tortoise (Gopherus polyphemus, ST),
- Florida sandhill crane (Antigone canadensis pratensis, ST),
- Black Creek crayfish (Procambarus pictus, ST)
- Eastern indigo snake (*Drymarchon corais couperi*, Federally Threatened [FT])
- Frosted flatwoods salamander (Ambystoma cingulatum, FT)
- Red-cockaded woodpecker (Picoides borealis, Federally Endangered)
- Wood stork (Mycteria americana, FT)
- Rufa red knot (Calidris canutus rufa, FT)

FWC staff conducted a geographic information system analysis of the project area which found that the project area is also located near, within, or adjacent to:

- Potential habitat for state-listed species:
  - o Little blue heron (Egretta caerulea, ST)
  - o Tricolored heron (Egretta tricolor, ST)
- Potential habitat for the Florida black bear (Ursus americanus floridanus North Bear Management Unit)

#### Comments and Recommendations

### Gopher Tortoise

The project area has potential habitat for the gopher tortoise and FWC has issued approximately 40 gopher tortoise relocation permits within 2 miles of the project site. The applicant should refer to the FWC's Gopher Tortoise Permitting Guidelines (Revised July 2020) (<a href="https://www.myfwc.com/license/wildlife/gopher-tortoise-permits/">https://www.myfwc.com/license/wildlife/gopher-tortoise-permits/</a>) for survey methodology and permitting guidance prior to any development activity. Specifically, the permitting guidelines include methods for avoiding impacts as well as options and state requirements for minimizing, mitigating, and permitting potential impacts of the proposed activities. If you have any questions regarding gopher tortoise permitting, please contact Eric Seckinger by phone at (850) 921-1029 or at Eric.Seckinger@MyFWC.com.

## Florida Sandhill Crane

The applicant's consultants observed Florida sandhill cranes during the site assessment, which occurred outside of the nesting season. The improved pasture and field crops onsite may provide foraging habitat for Florida sandhill crane and the scrub-shrub wetlands and marshes on-site may provide potential nesting habitat for this species. FWC staff recommends that surveys for nesting Florida sandhill cranes be conducted prior to construction activities and during the December through August breeding season. If construction occurs over several years, it may be necessary to conduct surveys each year as Florida sandhill cranes do not nest in the same location every year. If active nests are identified on-site, the Florida Sandhill Crane Species Conservation Measures and Permitting Guidelines recommend that the nest site be buffered by 400 feet to avoid disturbance by human activities. If nesting is discovered after construction has begun or

Kristen Reed Page 3 January 21, 2021

if maintaining the recommended buffer is not possible, the applicant can contact FWC staff identified below to discuss potential permitting needs. Additional information and guidance for conducting Florida sandhill crane surveys can be found in the Florida Sandhill Crane Species Conservation Measures and Permitting Guidelines (<a href="https://myfwc.com/media/11565/final-florida-sandhill-crane-species-guidelines-2016.pdf">https://myfwc.com/media/11565/final-florida-sandhill-crane-species-guidelines-2016.pdf</a>).

### State-listed Wading Birds

The potential exists for wading bird nesting activity in the wetlands on the project site. FWC staff recommends that specific surveys be conducted for wading birds in potential nesting areas prior to the commencement of any clearing, grading, or filling activities. Surveys should be conducted during their breeding season, which extends from March through August. Additional information and guidance for conducting surveys can be found in the Species Conservation Measures and Permitting Guidelines for state-threatened wading birds (<a href="https://mvfwc.com/media/18634/threatenedwadingbirds-guidelines.pdf">https://mvfwc.com/media/18634/threatenedwadingbirds-guidelines.pdf</a>). If there is evidence of nesting during this period, FWC staff recommends that any wading bird nest sites be buffered by 100 meters (330 feet) to avoid disturbance by human activities. If nesting is discovered after site activities have begun, if the removal or trimming of trees with active nests is unavoidable, or if maintaining the recommended buffer is not possible, the applicant may contact the FWC staff identified below to discuss potential permitting alternatives.

This project may create or maintain appropriate habitat for wading birds on-site and the following guidelines may be used to help enhance this habitat within the development:

- Maintain vegetated visual buffers around nesting colonies and feeding areas to protect birds from human disturbance,
- Include islands with suitable nesting habitat when constructing new ponds,
- Leave shrubs around the edges of ponds to provide nesting and foraging habitat and for bank stabilization, and
- Minimize fertilizer, herbicide, and pesticide runoff into wetlands.

## Black Creek Crayfish

Black Creek crayfish inhabit freshwater streams nearby in Duval and Clay Counties. Specifically, there have been 16 documented observations of the species within 5 miles of the project site and the species could also be found within Deep Creek, a stream that is present within the project area. The Black Creek crayfish requires perennial streams that have cool, highly oxygenated water, sufficient streamside vegetation for cover and food, and canopy to regulate water temperature. The presence of vegetation within and along creek banks as well as tree roots and submerged detritus are important shelter and food sources for the crayfish. This species is particularly susceptible to pollution, changes in water temperature, siltation, and other changes in water quality. FWC staff recommends dipnet surveying for Black Creek crayfish if construction activities have the potential to impact areas of suitable habitat within Deep Creek. If Deep Creek is found to have the Black Creek crayfish or suitable habitat, FWC staff recommends the applicant refer to the 2018 Species Conservation Measures and Permitting Guidelines for the Black Creek Crayfish (https://myfwc.com/media/11560/black-creek-crayfish-guidelines.pdf).

Kristen Reed Page 4 January 21, 2021

### Florida Black Bear

The FWC has received 31 reports of human-bear conflicts within a 5-mile radius of the project site since 2002. Florida black bears are common in this area which is within the North Bear Management Unit identified in the 2019 Bear Management Plan. While black bears tend to shy away from people, they are adaptable and will take advantage of human-provided food sources. This includes sources that are currently available near this site, sources that may be available during construction, and sources available after construction, including unsecured garbage, pet food, and bird seed. Once bears become accustomed to finding food around people, their natural wariness is reduced to the point that there can be an increased risk to public safety or private property.

Proactive planning may help prevent or reduce future conflicts with bears. Site designs for larger developments should locate conservation areas along the borders of developed areas to avoid encouraging bears to forage within developed areas (<a href="http://myfwc.com/wildlifehabitats/managed/bear/crossings/">http://myfwc.com/wildlifehabitats/managed/bear/crossings/</a>). If a homeowners' association or community covenants are planned, by-laws that would require residents to take measures to prevent attracting bears into the neighborhood are recommended. Sample by-law language used by other Florida communities is available at (<a href="http://myfwc.com/wildlifehabitats/managed/bear/living/community-group/bylaw/">http://myfwc.com/wildlifehabitats/managed/bear/living/community-group/bylaw/</a>).

During construction, construction sites should be kept clean, with refuse that might attract bears kept separate from construction debris and stored securely in bear-resistant containers or removed daily from the construction site before dark. Refuse that might attract bears includes all food and drink-related materials, as well as any items with strong scents like cleaning agents. Once the development is completed, residents should be provided with bear-resistant garbage cans as part of their regular waste service, and any larger waste storage containers should also be bear-resistant. Providing residents with information on how to avoid human-bear conflicts is also recommended. This information can include:

- Options for keeping garbage secure can include using bear-resistant garbage
  containers, modifying regular containers to be bear-resistant, or keeping
  containers secure in a garage or sturdy shed and then placing garbage on the curb
  the morning of pick-up rather than the night before
  (http://myfwc.com/wildlifehabitats/managed/bear/living/attractants/);
- Removing bird and wildlife feeders, or modifying them to exclude bears (http://myfwc.com/wildlifehabitats/managed/bear/wildlife-feeders/);
- Using electric fencing to secure outdoor attractants like fruiting trees/shrubs, gardens, compost, and small livestock (https://myfwc.com/media/1886/electricfence.pdf);
- Proper composting in bear range (https://myfwc.com/media/1888/howtocompostinbearcountry.pdf);
- Keeping pets safe (https://myfwc.com/wildlifehabitats/wildlife/bear/living/protect-pets/); and
- Cleaning and securing barbeque grills.

Kristen Reed Page 5 January 21, 2021

> Information should also include guidelines for how residents should respond to bears in the area, such as

- What to do if they encounter a bear, whether from a distance or at close range,
- How to keep pets and livestock safe in bear range, and
- When and how to contact the FWC regarding a bear issue.

FWC staff is available to assist with residential planning to incorporate the above features. Additional information about Florida black bears can be found on FWC's website at <a href="http://www.myfwc.com/wildlifehabitats/managed/bear">http://www.myfwc.com/wildlifehabitats/managed/bear</a>.

### Conceptual Master Plan

Based on discussions with the City of Jacksonville staff, the applicant will be required by the Comprehensive Plan to produce a conceptual master plan prior to the start of development. FWC staff provide technical assistance during development of master plans throughout Florida to avoid, minimize, or mitigate for any potential impacts to federally or state-listed species. Early coordination can also reduce the need for listed species permitting. To initiate coordination with FWC regarding the conceptual master plan, the applicant may submit a request to ConservationPlanningServices@MyFWC.com.

### Lakes and Ponds

Based on the type of development proposed within the application, the applicant will likely create or modify several lakes and ponds for stormwater management, to support conservation lands, or for resident use. The creation of these waterbodies could provide potential wildlife habitat as well as a recreational area for fishing and wildlife viewing. Ponds can be managed for both fish production and wildlife habitat, including wading birds and waterfowl. Pond construction at a 3:1 slope to two (2) feet below normal water levels and with the slope seeded and mulched to minimize erosion is ideal for wildlife use. The addition of native wetland plants along this gradual slope could provide a vegetated littoral fringe which could increase the habitat value of the site and possibly provide foraging or nesting areas for several wading bird species. Littoral fringe habitat may also provide spawning habitat for fish which would enhance future recreational fishing opportunities for the community. FWC staff recommend a commitment to longterm maintenance and development of a plan for managing exotic invasive plant species that can significantly degrade habitat values and impact ponds, wetlands and nearby natural areas. The Florida Wildlife Conservation Guide provides more information on this topic with suggested guidelines for construction and management of stormwater ponds (http://myfwc.com/conservation/you-conserve/recreation/pond-management/).

#### Federal Species

This site may also contain habitat suitable for the federally listed species identified above. FWC staff recommends that the applicant coordinates with the USFWS North Florida Ecological Services Office (ESO) as necessary for information regarding potential impacts to these species. The USFWS North Florida ESO can be contacted at (904) 731-3336 for additional information.

Kristen Reed Page 6 January 21, 2021

> FWC staff appreciates the opportunity to review these projects and will continue to be available to assist throughout the permitting process. For specific technical questions regarding the content of this letter, please contact Sean Greene at (386) 406-0814 or by email at Sean.Greene@MyFWC.com. All other inquiries may be directed to ConservationPlanningServices@MyFWC.com.

Sincerely,

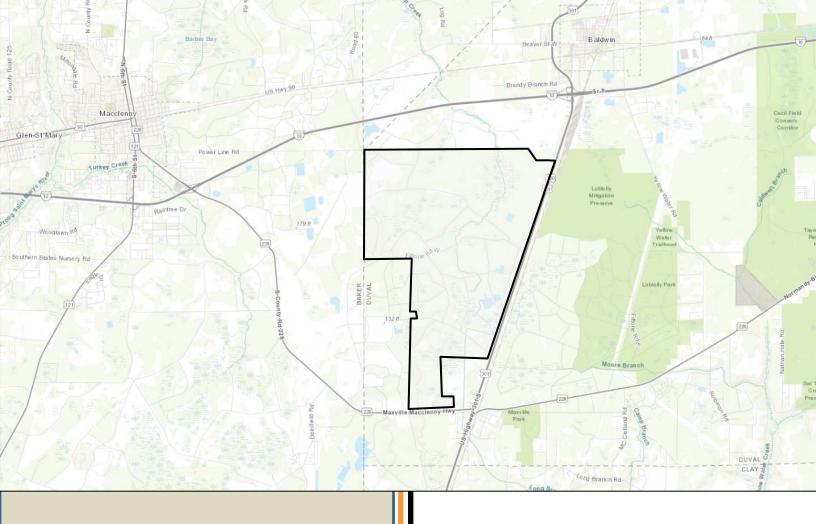

Jason Hight

# Introduction:

A mixed-use development anticipated to include 11,250 single-family dwelling units, 3,750 multi-Family dwelling units, 750,000 SF commercial/retail, 340 rooms hotel, 300,000 SF light industrial, 300,000 SF office and 375,000 SF hospital/medical office uses is proposed for construction. The project will be built in three (3) phases. The proposed development will be located on the southwest quadrant of I-10 and US 301 interchange. Access to the proposed development will be provided via several driveways and roadways on US 301. **Figure 01** shows the location of the proposed development. A copy of the conceptual site plan provided by Prosser, Inc. is included as **Attachment A**.

The proposed development is seeking Concept Site Plan approved by the City of Jacksonville (COJ). A traffic study determining the project impacts on the roadway segments in the vicinity of the proposed development is required to be submitted to COJ for approvals. This traffic study is consistent with the methodology that was submitted to COJ and Florida Department of Transportation (FDOT) on 07/16/2021. A copy of the methodology is included as **Attachment B.** 

## **Project Development Plan:**

The proposed development is planned for construction in three (3) phases. **Table 02** shows a summary of the project phasing schedule.

Phase 01 development (2022 – 2026) is anticipated to include the following:

- 150,000 SF of General Light Industrial
- 2,500 Single-family Dwelling Units
- 1,000 Multi-family Dwelling Units
- 150,000 SF Commercial/Retail
- 100,000 SF Office
- 120 Rooms Hotel
- 50,000 SF Medical Office

Phase 02 (2027 – 2031) development is anticipated to include the following:

- 150,000 SF of General Light Industrial
- 5,750 Single-family Dwelling Units
- 1,200 Multi-family Dwelling Units
- 325,000 SF Commercial/Retail
- 100,000 SF Office
- 220 Rooms Hotel
- 150,000 SF Hospital/Medical Office

Phase 03 (2032 – 2037) development is anticipated to include the following:

- 3,000 Single-family Dwelling Units
- 1,550 Multi-family Dwelling Units
- 275,000 SF Commercial/Retail
- 100,000 SF Office
- 175,000 SF Medical Office

# **Study Area and Existing Conditions:**

As discussed at the methodology meeting and included in the document, the study includes the following roadway segments.

- US 301 South of Normandy Boulevard
- US 301 Normandy Boulevard to I-10
- US 301 I-10 to Beaver Street
- Normandy Boulevard US 301 to CR 217
- Normandy Boulevard CR 217 to Yellow Water Road
- Normandy Boulevard Yellow Water Road to POW-MIA Memorial Parkway
- I-10 West of Baker County Line
- I-10 Baker County Line to Duval County Line
- I-10 Duval County Line to US 301
- I-10 US 301 to SR 23 (First Coast Expressway)
- I-10 SR 23 (First Coast Expressway) to Chaffee Road
- I-10 Chaffee Road to Hammond Boulevard
- I-10 Hammond Boulevard to I-295

The existing conditions details of the above stated study segments were obtained from the FDOT Traffic Counts Online Portal and FDOT D2 LOS Manual. **Table 02** summarizes the existing conditions for the above stated roadway segments. The FDOT D2 LOS Manual provides the roadway segments adopted LOS Standard and the peak hour Maximum Service Volumes (MSVs). The corresponding Daily MSVs were obtained from the FDOT Q-LOS Generalized Standard Volumes Tables. **Attachment C** includes copies of the traffic counts data obtained from the FDOT Traffic Counts Online Portal, FDOT D2 LOS Manual and the FDOT Q-LOS Generalized Standard Volumes Tables.

### **Trip Generation:**

Daily, AM peak and PM peak trip generation for the proposed development under each of the development phases was estimated using the rates and equations included in the Trip Generation Manual 10<sup>th</sup> Edition, published by the Institute of Transportation Engineers.

Due to the mixed-use nature of the proposed development, internal capture trips were estimated

using the internal capture rates included in the Trip Generation Manual. Internal capture trips were estimated using the NCHRP Report 684 Internal Capture Estimator for mixed-use developments. Pass-by trips for the commercial development was estimated using the pass-by rates included in the Trip Generation Manual. ITE does not provide daily pass-by trip rates. Hence, the average rate of Mid-Day and PM peak pass-by trip rate was used to determine the daily pass-by trips.

**Tables 03, 04 and 05** summarizes the Daily, AM Peak and PM Peak trip generation, internal capture and pass-by trips for each of the three (3) project development phases. **Attachment D** includes NCHRP 684 Internal Capture Worksheets.

### **Future Background Traffic Volumes:**

The year 2026, 2031 and 2037 background conditions AADT were estimated using the year 2025, 2030, 2035 and 2040 AADT projections included in the FDOT D2 LOS Manual. **Table 06** summarizes the year 2026, 2031 and 2037 background conditions AADT and LOS on each of the study area roadway segments. Previously stated **Attachment C** includes the FDOT D2 LOS summary for each of the study area roadway segments.

## **Project Traffic Distribution and Assignment:**

Project traffic distribution for the proposed development under each of the three (3) phases was determined by running the interim year 2025, year 2030 and year 2035 model sets of the NERPM\_AB travel demand model developed as part of the Year 2045 Long Range Transportation Plan by the North Florida Transportation Planning Organization (NFTPO).

Each of the interim year model sets was verified to ensure the Trails Mixed Use development (on the southside of Normandy Boulevard and east of US 301) was included. Additionally, the proposed 301 Villages development under each of the development phases was included to the travel demand model. **Attachment E** includes the socio-economic variables data that were verified and included in each of the interim year 2025, year 2030 and year 2035 travel demand model sets.

**Table 07** summarizes the project traffic distribution and daily traffic assignment on each of the study roadway segments under each of the three (3) project development phases. **Attachment F** includes copies of the travel demand model plots showing project traffic distribution each of the project development phases. The project traffic distribution for each of the development phases was multiplied by the daily net external trips for each of the project development phases estimated in previously stated **Tables 03, 04** and **05** respectively. **Figures 02, 03** and **04** summarize the project traffic distribution and daily traffic assignment on each of the study roadway segments.

## **Build-Out Conditions Roadway Segment Analysis:**

Build-out conditions Roadway Segment Analysis includes the future year background traffic volumes and project traffic assignment on each of the study roadway segments under each of the three (3) development phases.

**Table 08** summarizes the year 2026 Phase 01 development conditions roadway segments analysis. As summarized in this table, all of the study roadway segments are anticipated to operate under the adopted level of service with the exception of I-10 between US 301 to SR 23 (First Coast Expressway).

**Table 09** summarizes the year 2031 Phase 02 development conditions roadway segments analysis. As summarized in this table, all of the study roadway segments are anticipated to operate under the adopted level of service with the exception of the following roadway segments:

- US 301 301 Villages Project Entrances to I-10
- I-10 West of Baker County Line
- I-10 US 301 to SR 23 (First Coast Expressway)
- I-10 SR 23 (First Coast Expressway) to Chaffee Road
- I-10 Chaffee Road to Hammond Boulevard/Greenland Avenue/I-295
- I-10 Hammond Boulevard/Greenland Avenue to I-295

**Table 10** summarizes the year 2037 Phase 03 development conditions roadway segments analysis. As summarized in this table, all of the study roadway segments are anticipated to operate under the adopted level of service with the exception of the following roadway segments:

- US 301 301 Villages Project Entrances to I-10
- I-10 West of Baker County Line
- I-10 US 301 to SR 23 (First Coast Expressway)
- I-10 SR 23 (First Coast Expressway) to Chaffee Road
- I-10 Chaffee Road to Hammond Boulevard/Greenland Avenue/I-295
- I-10 Hammond Boulevard/Greenland Avenue to I-295

Please note that FDOT's Long Range Cost Feasible Plan (FY 2029 -2045) includes widening of I-10 between CR 125 and I-295 between the year 2040 and 2045. **Attachment G** includes a copy of the FDOT D2 Long Range Cost Feasible Plan FY – 2029 – 2045.

Please note that the development quantities used in this analysis is under the maximum development density worst-case scenario and the proposed development density may not be possible.

**Table 11** shows potential mobility fee calculations for the proposed development. These fees could be potentially used to provide some of the impacted roadway segments.

# **Operational Analysis:**

A detailed operational analysis at all the project access intersections on US 301 will be submitted to both FDOT and COJ at the time of 10-set review submittals.

# **Summary and Conclusions:**

A mixed-use development anticipated to include 11,250 single-family dwelling units, 3,750 multi-Family dwelling units, 750,000 SF commercial/retail, 340 rooms hotel, 300,000 SF light industrial, 300,000 SF office and 375,000 SF hospital/medical office uses is proposed for construction. The project will be built in three (3) phases. The proposed development will be located on the southwest quadrant of I-10 and US 301 interchange. Access to the proposed development will be provided via several driveways and roadways on US 301.

The proposed development is seeking Concept Site Plan approved by the City of Jacksonville (COJ). A traffic study determining the project impacts on the roadway segments in the vicinity of the proposed development is required to be submitted to COJ for approvals.

The existing conditions details of the above stated study segments were obtained from the FDOT Traffic Counts Online Portal and FDOT D2 LOS Manual. The FDOT D2 LOS Manual provides the roadway segments adopted LOS Standard and the peak hour Maximum Service Volumes (MSVs). The corresponding Daily MSVs were obtained from the FDOT Q-LOS Generalized Standard Volumes Tables.

Daily, AM peak and PM peak trip generation, internal capture and pass-by trips for the proposed development under each of the development phases was estimated using the rates and equations included in the Trip Generation Manual 10<sup>th</sup> Edition, published by the Institute of Transportation Engineers.

The year 2026, 2031 and 2037 background conditions AADT were estimated using the year 2025, 2030, 2035 and 2040 AADT projections included in the FDOT D2 LOS Manual.

Project traffic distribution for the proposed development under each of the three (3) phases was determined by running the interim year 2025, year 2030 and year 2035 model sets of the NERPM\_AB travel demand model developed as part of the Year 2045 Long Range Transportation Plan by the North Florida Transportation Planning Organization (NFTPO).

Build-out conditions Roadway Segment Analysis includes the future year background traffic volumes and project traffic assignment on each of the study roadway segments under each of the three (3) development phases.

Under the year 2026 Phase 01 development conditions, all of the study roadway segments are anticipated to operate under the adopted level of service with the exception of I-10 between US 301 to SR 23 (First Coast Expressway).

Under the year 2031 Phase 02 development conditions, all of the study roadway segments are anticipated to operate under the adopted level of service with the exception of the following roadway segments:

- US 301 301 Villages Project Entrances to I-10
- I-10 West of Baker County Line
- I-10 US 301 to SR 23 (First Coast Expressway)
- I-10 SR 23 (First Coast Expressway) to Chaffee Road
- I-10 Chaffee Road to Hammond Boulevard/Greenland Avenue/I-295
- I-10 Hammond Boulevard/Greenland Avenue to I-295

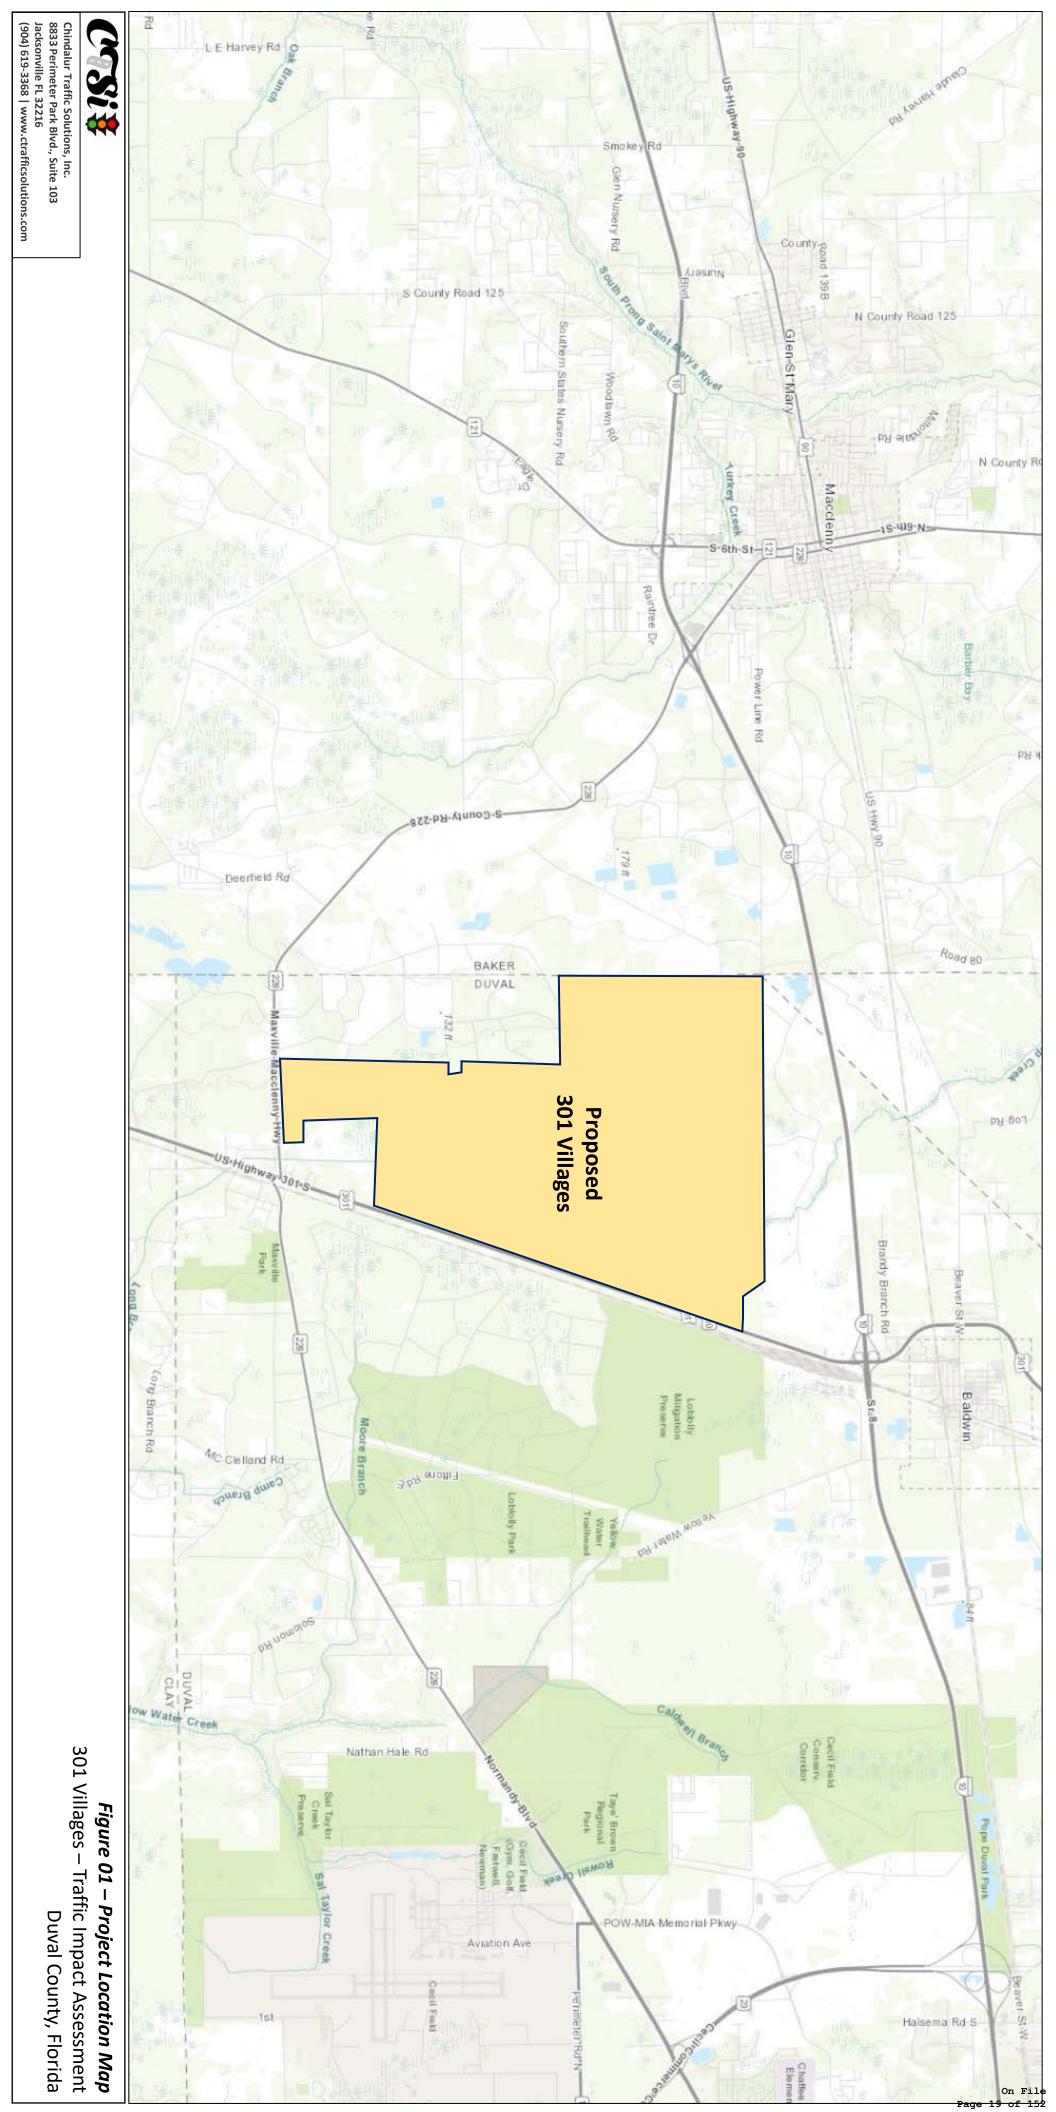

Under the year 2037 Phase 03 development conditions, all of the study roadway segments are anticipated to operate under the adopted level of service with the exception of the following roadway segments:

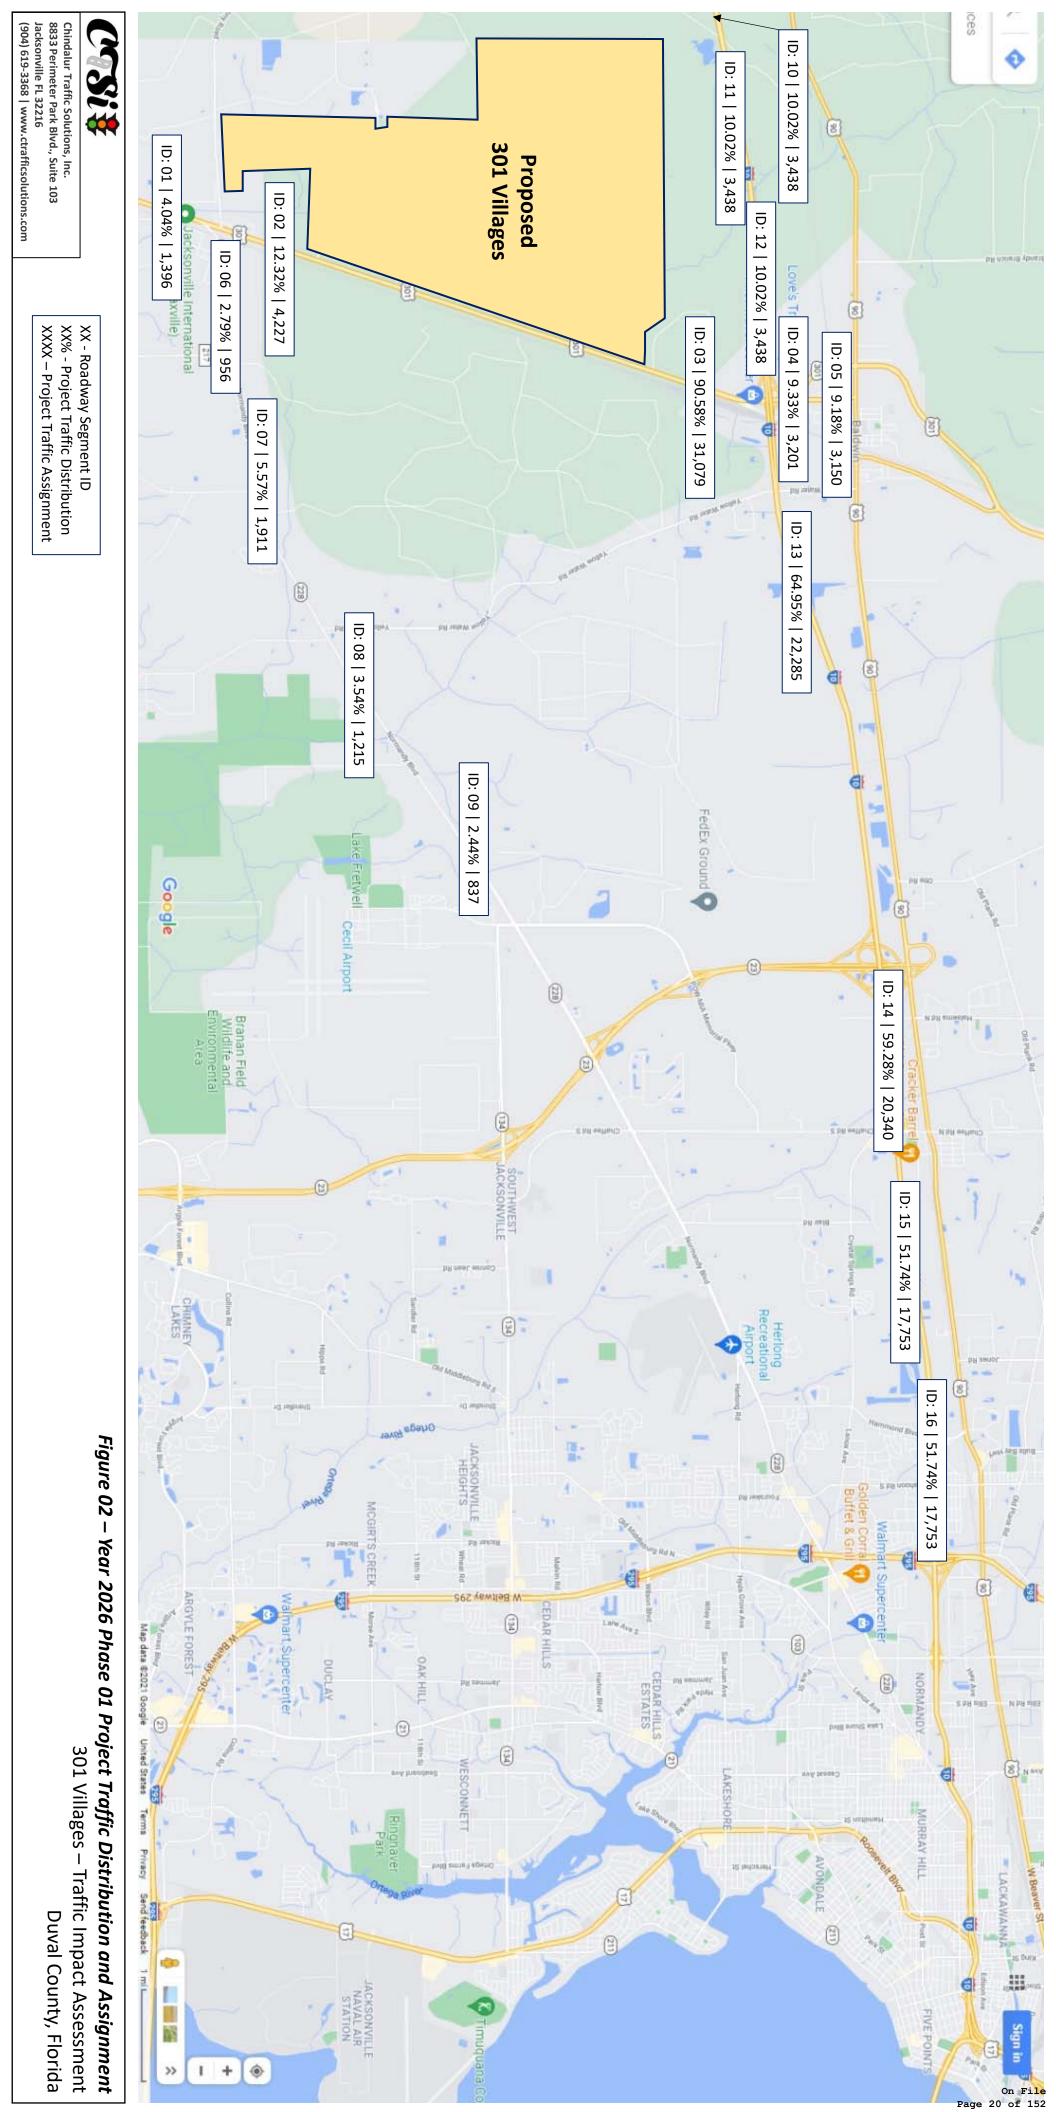

- US 301 301 Villages Project Entrances to I-10
- I-10 West of Baker County Line
- I-10 US 301 to SR 23 (First Coast Expressway)
- I-10 SR 23 (First Coast Expressway) to Chaffee Road
- I-10 Chaffee Road to Hammond Boulevard/Greenland Avenue/I-295
- I-10 Hammond Boulevard/Greenland Avenue to I-295

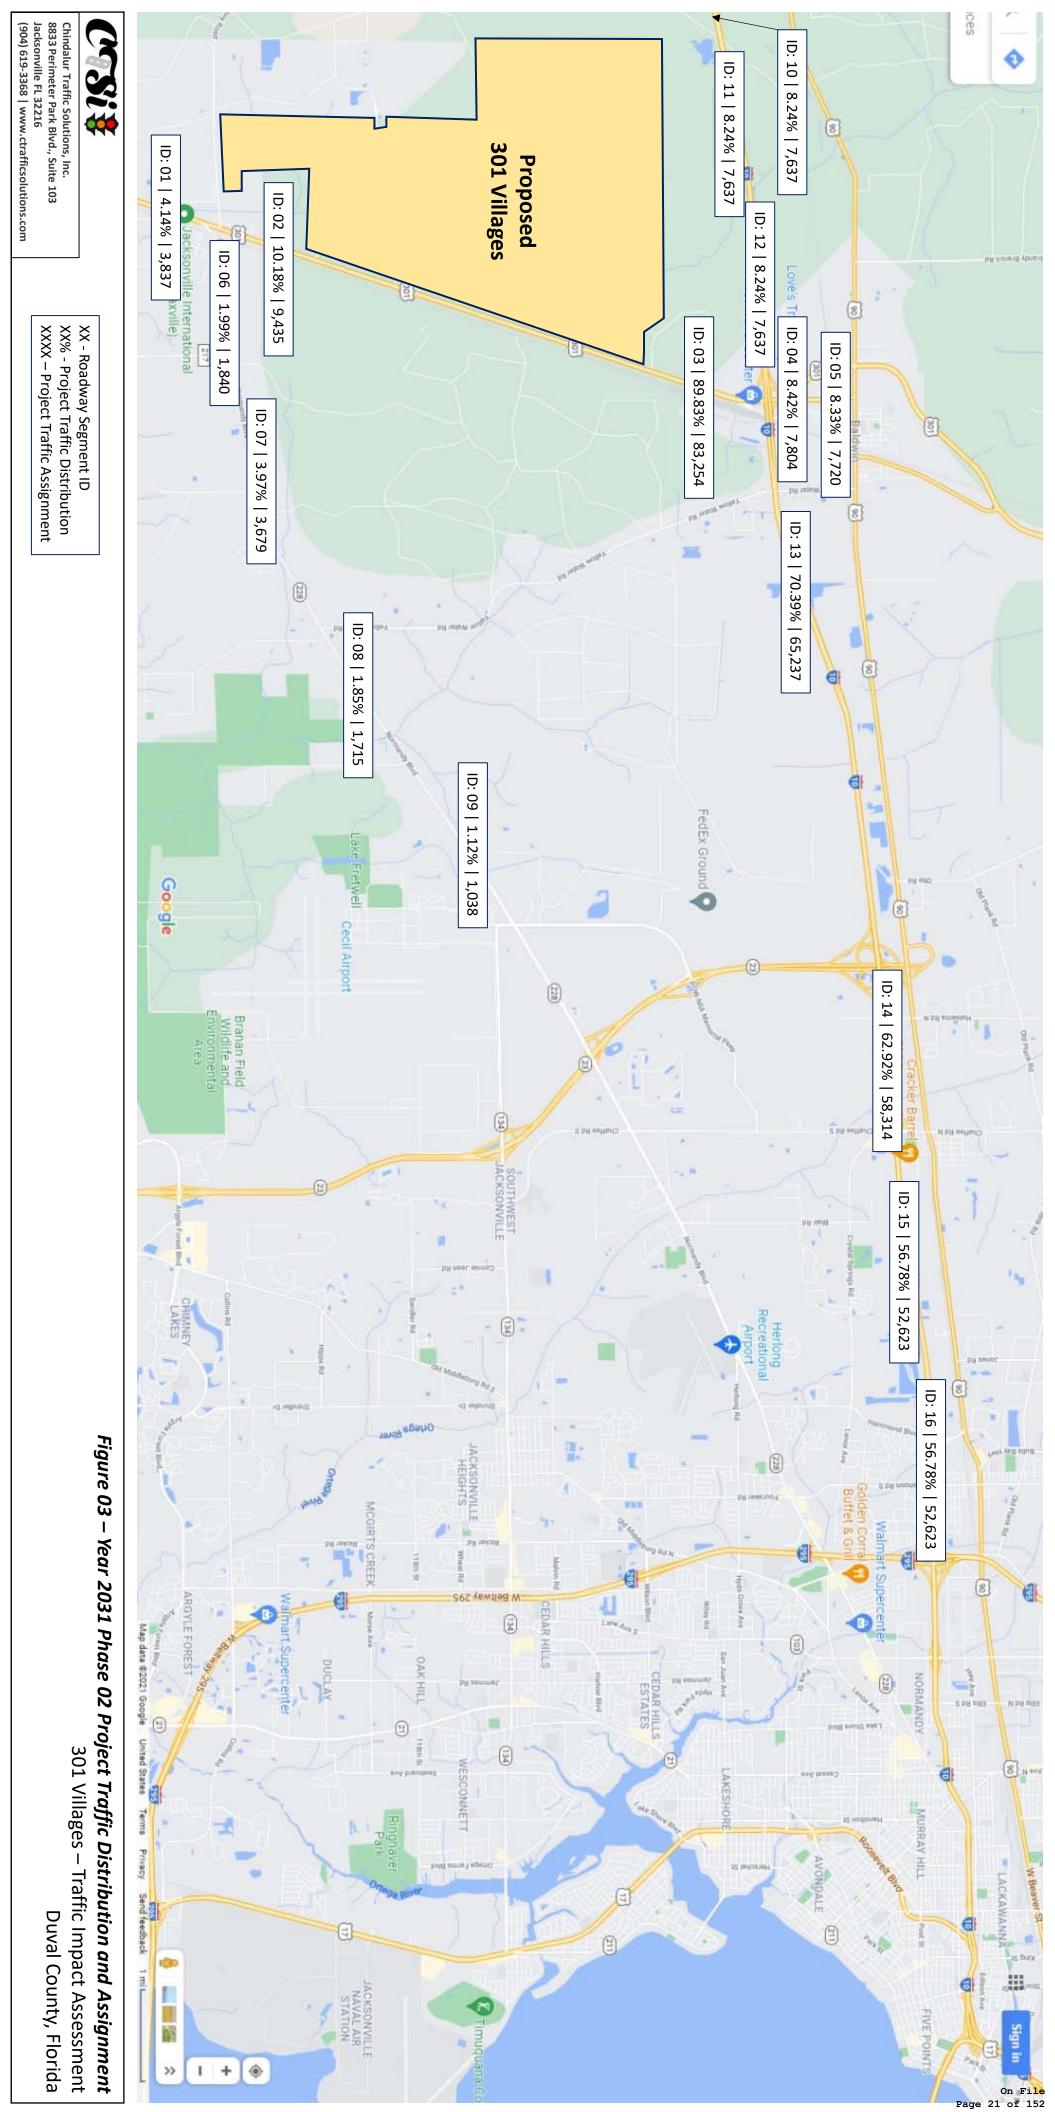

Please note that FDOT's Long Range Cost Feasible Plan (FY 2029 -2045) includes widening of I-10 between CR 125 and I-295 between the year 2040 and 2045.

Please note that the development quantities used in this analysis is under the maximum development density worst-case scenario and the proposed development density may not be possible.

A detailed operational analysis at all the project access intersections on US 301 will be submitted to both FDOT and COJ at the time of 10-set review submittals.

Study Methodology Document

### Methodology Memorandum

301 Villages –Traffic Impact Assessment
Duval County, Florida

### City of Jacksonville

Laurie Santana
Chief of Transportation Planning Division
LSantana@coj.net

Christopher W. LeDew, P.E. Chief of Traffic Engineering CLedew@coj.net

John Kolczynski E.I. Traffic Technician Senior <u>JohnFK@coj.net</u>

### Florida Department of Transportation

Tom Cavin, P.E.

Jacksonville Studies Engineer/Access Management Tom.cavin@dot.state.fl.us

Julian McKinley P.E.

Maintenance Program Engineer/D2 Jax Maintenance Julian.McKinley@dot.state.fl.us

A mixed-use development anticipated to include 11,250 single-family dwelling units, 3,750 multi-Family dwelling units, 750,000 SF commercial/retail, 340 rooms hotel, 300,000 SF light industrial, 300,000 SF office and 375,000 SF hospital/medical office uses is proposed for construction. The project will be built in 3 phases. The proposed development will be located on the southwest quadrant of I-10 and US 301 interchange.

A site location and conceptual master plan (Provided by Prosser, Inc.) is attached. The City of Jacksonville (COJ) Planning Department is requiring a traffic impact memo summarizing an assessment of the currently identified and expected roadway operating conditions of the immediately surrounding transportation network. This memo provides a summary of the methodology that will be adopted in performing the traffic impact assessment.

### **Trip Generation:**

Trip generation and internal capture for the proposed development will be estimated using the rates, equations and procedures included in the Trip Generation Manual, 10<sup>th</sup> Edition published by the Institute of Transportation Engineers (ITE).

### Study Area:

The study will include the following roadway segments:

- US 301 South of Normandy Boulevard
- US 301 Normandy Boulevard to I-10
- US 301 I-10 to Beaver Street
- Normandy Boulevard US 301 to CR 217
- Normandy Boulevard CR 217 to Yellow Water Road
- Normandy Boulevard Yellow Water Road to POW-MIA Memorial Parkway
- I-10 West of Baker County Line
- I-10 Baker County Line to Duval County Line
- I-10 Duval County Line to US 301

### **Methodology Memorandum**

301 Villages –Traffic Impact Assessment
Duval County, Florida

- I-10 US 301 to SR 23 (First Coast Expressway)
- I-10 SR 23 (First Coast Expressway) to Chaffee Road
- I-10 Chaffee Road to Hammond Boulevard
- I-10 Hammond Boulevard to I-295

### **Planned and Programmed Improvements:**

The Northeast Florida Transportation Planning Organization (NFTPO) Long Range Transportation Plan (LRTP), Priority Projects List (PPL), Transportation Improvement Program (TIP) and the Florida Department of Transportation (FDOT) Work Program will be reviewed to identify any roadway projects within the vicinity of the study area of the proposed development and incorporated in the analysis.

### **Analysis Time Period:**

Analysis for the proposed development will be performed based on daily traffic volumes under existing year 2021, year 2026 (Phase 01), year 2031 (Phase 02) and year 2036 (Phase 03) development conditions.

### **Data Collection:**

Existing traffic AADTs will be obtained from the Florida Traffic Online (FTO) website and COJ Planning Department. Future conditions AADT on the study area roadway segments will be obtained from the FDOT LOS Summary Manual

### **Project Traffic Distribution and Assignment:**

Project traffic distribution for the proposed development will be provided using the Northeast Regional Planning Model Activity-Based (NERPMAB) travel demand model. This distribution will be used to determine the project traffic assignment on the study segments. The travel demand model will be validated to include the following projects:

 The Trails PUD: Mixed use development with approximately 4,850 DU and 230,000 square feet commercial located south of Normandy Boulevard (SR 228) between Maxville-Middleburg Road and Solomon Road

### **Background and Build-Out Traffic Volumes:**

Background traffic volumes will be estimated by applying a growth factor obtained from the NERPMAB travel demand model to the existing traffic volumes. Buildout traffic volumes will include background traffic volumes and project traffic assignment for the proposed development.

### **Roadway Segment Analysis:**

Segment analysis of the above stated roadway segment will include future background conditions traffic plus the project traffic from the proposed development. Any impacts to the study area roadway segments will be identified and summarized.

### Access and Study Area Intersection Analysis:

Project access intersections and study area intersection analysis will be provided during project PUD and 10-set submittal process.

### **Methodology Memorandum**

301 Villages –Traffic Impact Assessment
Duval County, Florida

### **Traffic Study Report:**

A traffic study report summarizing the above tasks and the study findings will be submitted to FDOT and COJ for review and approval.

Thank you and please let me know if you have any questions.

Sincerely, Chindalur Traffic Solutions, Inc.

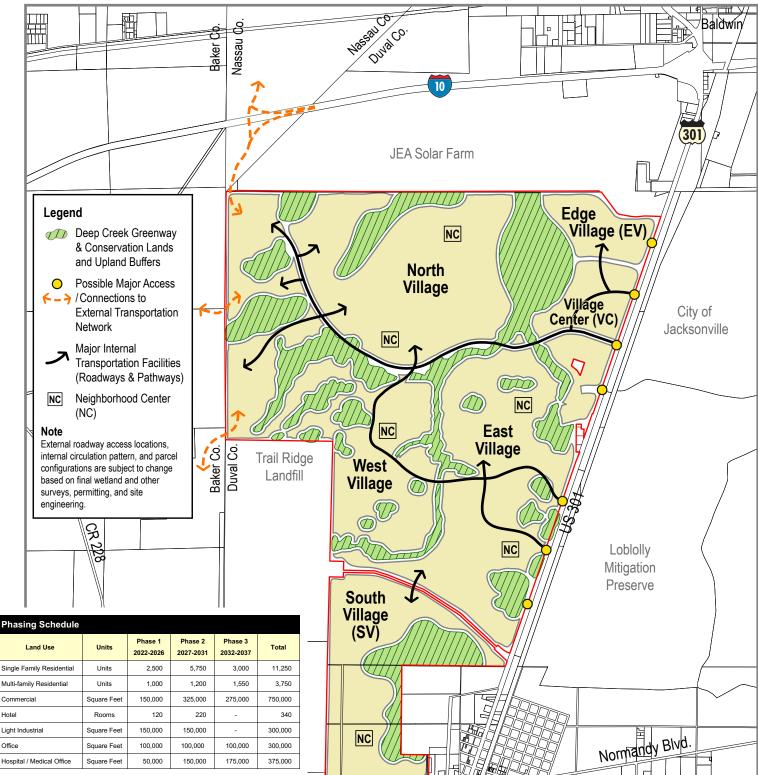

Rajesh Chindalur, P.E., PTOE Chindalur Traffic Solutions, Inc.

8833 Perimeter Park Boulevard, Suite 103, Jacksonville, FL 32216

<sup>1</sup>Values shown are presented as two-way annual average daily volumes for levels of service and are for the automobile/truck modes unless specifically stated. This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and deriving computer models should not be used for corridor or intersection design, where more refined techniques exist. Calculations are based on planning applications of the HCM and the Transit Capacity and Quality of Service Manual.

### Source.

Florida Department of Transportation Systems Implementation Office https://www.fdot.gov/planning/systems/

 $<sup>^2</sup>$  Level of service for the bicycle and pedestrian modes in this table is based on number of vehicles, not number of bicyclists or pedestrians using the facility.

 $<sup>^3</sup>$  Buses per hour shown are only for the peak hour in the single direction of the higher traffic

<sup>\*</sup> Cannot be achieved using table input value defaults.

<sup>\*\*</sup> Not applicable for that level of service letter grade. For the automobile mode, volumes greater than level of service D become F because intersection capacities have been reached. For the bicycle mode, the level of service letter grade (including F) is not achievable because there is no maximum vehicle volume threshold using table input value defaults.

### Generalized **Annual Average Daily** Volumes for Florida's

(continued)

<sup>1</sup>Values shown are presented as two-way annual average daily volumes for levels of service and are for the automobile/truck modes unless specifically stated. This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and deriving computer models should not be used for corridor or intersection design, where more refined techniques exist. Calculations are based on planning applications of the HCM and the Transit Capacity and Quality of Service Manual.

### Source.

Florida Department of Transportation Systems Implementation Office https://www.fdot.gov/planning/systems/

<sup>&</sup>lt;sup>2</sup> Level of service for the bicycle and pedestrian modes in this table is based on number of vehicles, not number of bicyclists or pedestrians using the facility.

<sup>&</sup>lt;sup>3</sup> Buses per hour shown are only for the peak hour in the single direction of the higher traffic flow

<sup>\*</sup> Cannot be achieved using table input value defaults.

<sup>\*\*</sup> Not applicable le for that level of service letter grade. For the automobile mode, volumes greater than level of service D become F because intersection capacities have been reached. For the bicycle mode, the level of service letter grade (including F) is not achievable because there is no maximum vehicle volume threshold using table input value defaults.

Multi	Undivided	Yes	-5%
Multi	Undivided	No	-25%

<sup>1</sup>Values shown are presented as peak hour directional volumes for levels of service and are for the automobile/truck modes unless specifically stated. This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and deriving computer models should not be used for corridor or intersection design, where more refined techniques exist. Calculations are based on planning applications of the HCM and the Transit Capacity and Quality of Service Manual.

<sup>2</sup>Level of service for the bicycle and pedestrian modes in this table is based on number of vehicles, not number of bicyclists or pedestrians using the facility.

<sup>3</sup> Buses per hour shown are only for the peak hour in the single direction of the higher traffic

\* Cannot be achieved using table input value defaults.

\*\* Not applicable for that level of service letter grade. For the automobile mode, volumes greater than level of service D become F because intersection capacities have been reached. For the bicycle mode, the level of service letter grade (including F) is not achievable because there is no maximum vehicle volume threshold using table input value defaults.

<sup>1</sup>Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

<sup>2</sup>Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

<sup>3</sup>Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

<sup>4</sup>Enter vehicle occupancy assumed in Table 1-A vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made to Tables 5-A, 9-A (O and D). Enter transit, non-motorized percentages that will result with proposed mixed-use project complete.

<sup>5</sup>Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A.

<sup>6</sup>Person-Trips

\*Indicates computation that has been rounded to the nearest whole number.

Estimation Tool Developed by the Texas A&M Transportation Institute - Version 2013.1

# MEETING SUMMARY

## The Trails PUD | SR 228 Corridor Study

December 7, 2020 2:00 PM – 2:31 PM

COJ: Laurie Santana, Soliman Salem, John Kolczynski

FDOT: Scott Clem, Brian Austin

**Attendees:** 

Benesch: Martha Moore

Absent: Chris LeDew, Tom Cavin

#### **DISCUSSION ITEMS:**

#### 1. Status of data collection and study

*Martha Moore:* The study limits are SR 228 from US 301 to SR 23. At the request of Scott Clem, we also included the intersection of SR 134 (103<sup>rd</sup> St) at POW-MIA Pkwy (fka New World Ave) and at SR 23.

The turning movement counts (TMCs) were conducted on September 23, 2020. Pre Covid volume counts (February 2020) on SR 228 were obtained from FDOT. These counts were in proximity to the proposed count locations in the scope and were used in lieu of new counts.

A TMC was taken at the SR 228 and Winding Mare Blvd intersection, which is the entrance to the Winchester Ridge subdivision. The directional distribution will be used to assign traffic from The Trails project; counts indicate that 85%-90% of trips will originate to the east.

Scott Clem stated that he is comfortable with the study area, which focuses on SR 228 and not US 301. He also stated that traffic from The Trails will head east to reach I-10 rather than west.

#### 2. Covid adjustment for traffic counts

Martha Moore: The date of the TMCs is after the start of school and two days prior to the declaration by Governor Ron DeSantis of the beginning of the Phase 3 of the Reopening Plan on September 25, 2020. As per a prior discussion with Tom Cavin, FDOT is not requiring Covid adjustment in Phase 3. This means that the study counts are likely close to baseline. As a check for the validity of the count data, Benesch compared the peak hours and volumes from the pre-Covid FDOT SR 228 counts to the study counts.

- AM The AM peak hours counted occurred 15-30 minutes later than the pre-Covid AM peaks.
   The Benesch counts were an average of 16% lower than the FDOT pre-Covid counts so all the AM counts will be adjusted up by 16%.
- PM The Benesch SR 228 counts were an average of 7% higher than the FDOT pre-Covid counts. The PM peak hour was similar as well. No adjustment is proposed in the PM.

Laurie Santana: Summarize and discuss the methodology with Chris LeDew, since he is not in the meeting.

[UPDATE FROM MARTHA] Martha and Chris discussed the methodology on December 31, 2020. Chris is agreeable to it.

#### 3. Socioeconomic data included in NERPM.

Soliman Salem confirmed that The Trails data is in the NERPM-AB.

#### 4. Status of I-10/US 301 development (301 Capital Partners) FLUM

Soliman Salem confirmed that the Prosser plan (attached) is not in the NERPM-AB.

*Scott Clem:* Some level of development, maybe not all, for 301 Villages should be included in the socioeconomic data. How much is the decision of the City.

Laurie Santana will check with Bill Killingsworth and forward the information. Soliman has a tool to edit the DAYSIM files and will coordinate with Benesch on how to use it.

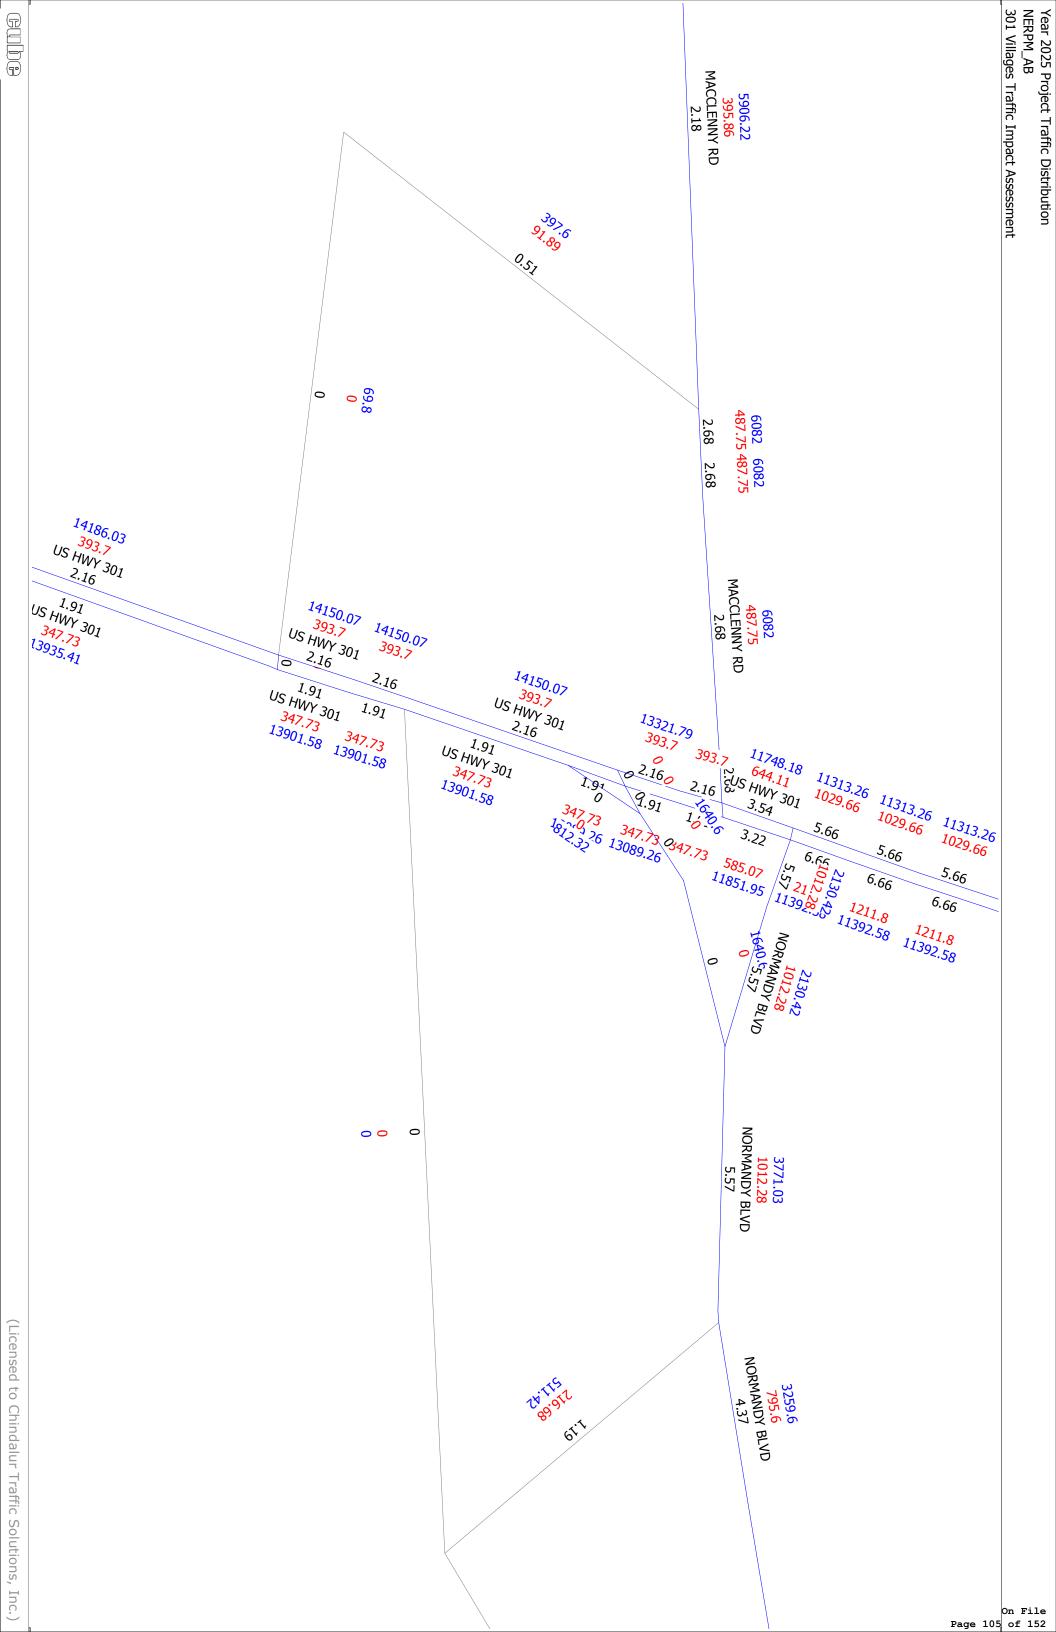

[UPDATE FROM LAURIE] Bill Killingsworth wants all the 301 Village development included. As per Scott Clem, the interchange with I-10 will not be added to the model.

INFLATION FACTORS FY 2031/32 - 1.474 FY 2037/38 - 1.791 Mega Projects Phased Over Time

NOTES

FY 2042/43 - 2.107

Values in thousands of dollars in the year of expenditure, inflated to the middle year of each band.
 All phase costs shown as supplied by each District.
 CON includes both Construction (CON52) and Construction Support (CEI).
 ROW includes both Right-of-Way Acquisition/Mitigation (ROW43/45) and Right-of-Way Support.
 "P3 Funds" - Used to fund Public-Private Partnership projects over a specified number of years.
 Revenue forecast provides separate values for PDE and PE than for ROW and CON.
 Other Funds - assumed to be toll revenue or partner funded.
