of the *Chlamydia* spp. (Lewin, 1990). The *Chlamydia* spp. are obligate intracellular bacteria that cause a wide range of diseases in humans and animals. The *Chlamydia* spp. are classified into two groups: *Chlamydia trachomatis* and *Chlamydia pneumoniae*. *Chlamydia trachomatis* is the most common cause of sexually transmitted infections in humans, while *Chlamydia pneumoniae* is a common cause of respiratory tract infections. The *Chlamydia* spp. are also known to cause a variety of other diseases, including conjunctivitis, lymphogranuloma venereum, and psittacosis. The *Chlamydia* spp. are transmitted from one individual to another through direct contact with infected secretions. The *Chlamydia* spp. are also known to cause a variety of other diseases, including conjunctivitis, lymphogranuloma venereum, and psittacosis. The *Chlamydia* spp. are transmitted from one individual to another through direct contact with infected secretions.
