Report of the Jacksonville Planning and Development Department
Small-Scale Future Land Use Map Amendment – March 15, 2024

Ordinance/Application No.: 2024-146 / L-5899-23C

Property Location: 7850 Cranbrooke Road, at the southwest corner of Garden Street and Cranbrooke Road

Real Estate Number(s): 002920 0025

Property Acreage: 1.80 acres

Planning District: District 5, Northwest

City Council District: District 12

Applicant: Lara Hipps

Current Land Use: Agriculture (AGR)

Proposed Land Use: Low Density Residential (LDR)

Development Area: Suburban Development Area

Current Zoning: Agriculture (AGR)

Proposed Zoning: Residential Low Density-100A (RLD-100A)

RECOMMENDATION: **APPROVE**

APPLICANT’S JUSTIFICATION FOR THE LAND USE MAP AMENDMENT

This land use amendment will allow the homeowner to build a second home on this lot.

BACKGROUND

The 1.80-acre subject property includes a single-family residential home and is located on the west side of Cranbrooke Road at the southwest quadrant of the intersection of Cranbrooke Road and Garden Street. According to the City’s Functional Highway Classification Map, Cranbrooke Road is a local roadway and Garden Street is classified as a collector roadway. The applicant is proposing an amendment to the Future Land Use Map series (FLUMs) from Agriculture (AGR) to Low Density Residential (LDR) in the Suburban Area, with a companion rezoning application from Agriculture (AGR) to Residential Low Density-100A (RLD-100A) in order to build a second home on the property. The companion rezoning, Ordinance 2024-147 is pending concurrently with this application.

Northwest of the subject property, across Garden Street, Ordinance 2021-828-E changed the land use from AGR to LDR on a 57 acre site; this site is currently undeveloped. North of the site, across Garden Street, Ordinance 2006-478-E changed the land use from AGR to LDR on 75 acres; this site has been developed with single-family homes. Ordinance 2022-003-E changed the land use from AGR to LDR on a 71 acre site on the south side of Garden Street to the east at the intersection with Imeson Road. South of Garden Street, to the immediate south, east and west of the property, includes land in the AGR land use category that is developed with single-family residential homes.

More specific uses along with the zoning and land use categories are listed below.

The adjacent land use categories, zoning districts and property uses are as follows:

North: Land Use: Low Density Residential (LDR), Agriculture (AGR)
Zoning: Residential Low Density-50 (RLD-50), Planned Unit Development (PUD)
Property Use: Undeveloped land, single-family residential

South: Land Use: AGR, CSV
Zoning: AGR
Property Use: Single-family residential, conservation land owned by SJRWMD

East: Land Use: AGR
Zoning: AGR
Property Use: Single-family residential

West: Land Use: AGR
Zoning: AGR
Property Use: Single-family residential

IMPACT ASSESSMENT

Potential impacts of a proposed land use map amendment have been analyzed by comparing the Development Impact Standards for the subject site's existing vs. proposed land use categories unless maximum density/intensity is noted on the Annotated FLUM or is in a site specific policy. Development Impact Standards are detailed in FLUE Policy 1.2.16, *Development Standards for Impact Assessment*. These standards produce development potentials as shown in this section.

Land Use Amendment Impact Assessment - Application Number L-5899-23C

Development Analysis 1.80 acres	
Development Boundary	Suburban Development Area
Roadway Frontage Classification / State Road	Garden Street- collector roadway; Cranbrooke Road- local roadway

Development Analysis 1.80 acres		
Plans and/or Studies	Northwest Jacksonville Vision Plan	
Site Utilization	Current: residential	Proposed: residential
Land Use / Zoning	Current: AGR / AGR	Proposed: LDR / RLD-100A
Development Standards for Impact Assessment	Current: 1 unit / 2.5 acres	Proposed: 5 units / acre
Development Potential	Current: 0 units	Proposed: 9 units
Net Increase or Decrease in Maximum Density	Increase of 9 units	
Net Increase or Decrease in Potential Floor Area	N/A	
Population Potential	Current: 0 people	Proposed: 23 people
Special Designation Areas		
Aquatic Preserve	NO	
Evacuation Zone	Zone E	
Airport Environment Zone	NO	
Industrial Preservation Area	NO	
Cultural Resources	NO	
Archaeological Sensitivity	Low Sensitivity	
Historic District	NO	
Coastal High Hazard	NO	
Adaptation Action Area	YES- Entire Site	
Groundwater Aquifer Recharge Area	NO- Discharge	
Wellhead Protection Zone	NO	
Boat Facility Siting Zone	NO	
Brownfield	NO	
Public Facilities		
Potential Roadway Impact	85 net new daily trips	
Potential Public School Impact	De Minimis	
Water Provider	Well	
Potential Water Impact	Increase of 2,394 gallons per day	
Sewer Provider	Septic	
Potential Sewer Impact	Increase of 1,795.5 gallons per day	
Potential Solid Waste Impact	Increase of 23.4 tons per year	
Drainage Basin/Sub-basin	Trout River / Bay Drain	
Recreation and Parks	NO	
Mass Transit Access	NO	
Natural Features		
Elevations	20-22 feet	
Land Cover	1100: Residential, low density - less than 2 dwelling units/acre	

Development Analysis 1.80 acres	
Soils	82: Pelham fine sand, depressional
Flood Zones	AE Flood Zone- Entire Site
Wetlands	Category III Wetlands – 0.19 of an acre of Wetlands on site
Wildlife (applicable to sites greater than 50 acres)	N/A

Utility Capacity

The calculations to determine the water and sewer flows contained in this report and/or this spreadsheet have been established by the City of Jacksonville Planning and Development Department and have been adopted by JEA solely for preparing this report and/or this spreadsheet. The method of calculating water and sewer flows in order to properly size infrastructure shall continue to be based on JEA's Water, Sewer and Reuse for New Development Projects document (latest edition).

The applicant intends to use the current well and septic on site. A JEA availability letter dated December 13, 2023, is included in the companion rezoning application. According to the letter, there is an existing 16-inch water main abutting the property along Garden Street. However, there is not a JEA sewer main available for connection within a quarter mile of the application site. According to the application, the applicant intends to use well and septic for the site. The applicant stated that there is an existing well onsite that would be utilized. While the intent of the applicant is to allow for a second single-family home on the property, residential development potential will be limited as provided for in the LDR land use category where centralized water and sewer are not available.

The maximum gross density in the Suburban Area shall be 7 units per acre when full urban services are available to the site and there shall be no minimum density; except as provided herein.

The maximum gross density shall be 2 units per acre and the minimum lot size shall be half an acre when both centralized potable water and wastewater are not available.

The maximum gross density shall be 4 units per acre and the minimum lot size shall be $\frac{1}{4}$ of an acre if either one of centralized potable water or wastewater services are not available

Future Land Use Element

Policy 1.2.8 Require new development and redevelopment in the Central Business District (CBD), Urban Priority Area (UPA), Urban Area (UA), and Suburban Area (SA) to be served by centralized wastewater collection and potable water distribution systems when centralized service is available to the site.

Development on sites located within the UPA, UA and SA are permitted where connections to centralized potable water and/or wastewater are not available subject to compliance the following provisions:

1. Single family/non-residential (estimated flows of 600 gpd or less) where the collection system of a regional utility company is not available through gravity service via a facility within a right-of-way or easement which abuts the property.
2. Non-residential (above 600 gpd) where the collection system of a regional utility company is not within 50 feet of the property.
3. Subdivision (non-residential and residential) where:
 - a. The collection system of a regional utility company is greater than 1/4 mile from the proposed subdivision.
 - b. Each lot is a minimum of ½ acre unsubmerged property.
 - c. Installation of dryline sewer systems shall be installed when programmed improvements are identified in the Capital Improvements Element which will make connections the JEA Collection Systems available within a five (5) year period.

Transportation

The subject site is 1.80 acres and is accessible from Cranbrooke Rd, a local facility. The proposed land use amendment is located within the Suburban Development Area and Mobility Zone 5. The applicant proposes to change the existing land use from Agriculture (AGR) to Low Density Residential (LDR).

Comprehensive Plan Consistency:

The Trip Generation Analysis is consistent with most recent version of the Transportation Element (TE) of the City of Jacksonville Comprehensive Plan (TE Objective 2.4 and Policies 1.2.1 and 2.4.2).

Transportation Element

Objective 2.4 The City shall plan for future multi-modal transportation needs, including the need for right-of-way, in order to support future land uses shown on the Future Land Use Map series.

Policy 1.2.1 The City shall use the Institute of Transportation Engineers *Trip Generation Manual*, latest edition, to determine the number of trips to be produced or attracted to a particular land use when assessing a traffic impact.

Policy 2.4.2 The City shall amend the adopted Comprehensive Plan to incorporate the data and analysis generated by a periodic regional transportation model and study and facilitate the implementation of the study recommendations.

Trip Generation Estimation:

Table A provides the daily trip generation comparison between the current and proposed comprehensive plan land uses and the potential transportation impacts on the roadway network. The current land use would result in 0 daily trips. If the land use is amended to allow for this proposed LDR development, this will result in 85 daily trips.

Transportation Planning Division RECOMMENDS the following:

The difference in daily trips for the proposed land use amendment will result in 85 net new daily trips when compared to the existing land use. The Transportation Planning Division recommends ongoing coordinating efforts with the City of Jacksonville Traffic Engineer to determine if a traffic operational analysis is needed.

Table A

Trip Generation Estimation Scenarios

Current Land Use Scenario	ITE Land Use Code	Potential Number of Units	Estimation Method	Gross Trips	Less Pass-By Trips	Daily Trips
AGR	210	0 SF DUs	T = 9.43 (X)	0	0	0
				Existing Scenario Total		0
Proposed Land Use Scenario	ITE Land Use Code	Potential Number of Units	Estimation Method	Gross Trips	Less Pass-By Trips	Daily Trips
LDR	210	9 SF DUs	T = 9.43 (X)	85	0	85
				Proposed Scenario Total		85
				Net New Daily Total		85

Source: Trip Generation Manual, 11th Edition, Institute of Engineers

School Capacity

While the proposed amendment includes a residential component, the site will generate 20 residential units or less. Therefore, the proposed development will have a de minimis impact on school capacity.

Evacuation Zone

The subject site is within Evacuation Zone E. As such, the land use application was routed to the City's Emergency Preparedness Division (EPD) for review and comment. EPD was provided with the land use application and the development potential of the proposed land use amendment change. Their complete analysis is provided below.

EPD Response:

The proposed property in land use amendment L-5899-23C will be in close proximity to Cranbrooke Road, indicating sufficient access to I-295 (4.38 road miles) and I-10 (8.38 road miles), primary evacuation routes.

In consideration of the surrounding evacuation zones (Zone E, and Zone D), nearest evacuation routes, and the estimate of 85 additional daily trips the development of the proposed property could create a localized impact to the traffic flow on I-295 and I-10 during an emergency evacuation scenario. The changes proposed through land use amendment application L-5899-23C would have a minimal impact on countywide evacuation clearance time within Duval County. Site design techniques that minimize disruption to existing traffic flow are encouraged. Any development should incorporate appropriate mitigation techniques to reduce flood vulnerability and minimize impacts to the floodplain.

Adaptation Action Area (AAA)

The amendment site is within the AAA. The AAA boundary is a designation in the City's 2045 Comprehensive Plan which identifies areas that experience coastal flooding due to extreme high tides and storm surge, and that is vulnerable to the related impacts of rising sea levels for the purpose of prioritizing funding for infrastructure needs and adaptation planning. The AAA is defined as those areas within the projected limit of the Category 3 storm surge zone, those connected areas of the 100-year and 500-year Flood Zone, and additional areas determined through detailed flood analysis.

The applicant is encouraged to consider site design measures, such as clustering development away from the AAA, to protect development from the impacts of flooding.

Conservation/Coastal Management Element

Policy 13.1.2 The City shall recognize existing regulations, programs and policies that overlap with the AAA and that are currently in place to limit public investment and address appropriate development and redevelopment practices related to flooding. These regulations, programs and policies include but are not limited to the floodplain management ordinance, CHHA policies, the Local Mitigation Strategy and the Post Disaster Redevelopment Plan and shall only be applied in cases where such regulation would otherwise apply to a development or redevelopment project.

Policy 13.3.1 The City shall consider the implications of the AAA when reviewing changes to the use, intensity and density of land lying within the AAA.

Policy 13.3.6 In order to guide development away from the Adaptation Action Area (AAA) towards areas that are already high, dry, and connected, the Planning and Development Department shall explore the feasibility of offering density bonuses, transfers of development rights, clustering development entitlements, or other strategies to limit new development within the AAA or environmentally sensitive or special flood hazard areas, or as an incentive for a development's use of low impact development stormwater solutions.

Flood Zones

The entire subject site is within the AE-Flood Zone. This flood zone is associated with the upper reaches of Trout River located approximately 3,200 feet to the north of the subject site. Flood zone designations are assigned by the Federal Emergency Management Agency (FEMA). FEMA defines the various flooding characteristics of different lands based on a 100-year storm. The 100-year storm or Special Flood Hazard Area (SFHA) refers to a flood occurring from a storm event that happens an average of every 100 years. This does not mean that a storm of this type will happen every 100 years. There is a 1-percent chance that a storm of this magnitude will occur in any given year.

The AE Flood Zone are areas within the 100-year floodplain or SFHA where flood insurance is mandatory. Any development within the floodplain will be required to comply with Chapter 652, the Floodplain Management Ordinance

Conservation /Coastal Management Element (CCME)

- Policy 2.6.1 The City shall continue to define the surface hydrology of the area to determine flood plain vulnerability and sensitivity and will determine appropriate protection measures.
- Policy 2.6.3 The City shall protect appropriate floodplain areas for the public benefit and restore degraded floodplain areas by:
- A. Land acquisition or conservation easement acquisition;
 - B. Regulation, including setbacks, buffer zones, designated wildlife corridors, low density zoning, performance standards and open space requirements; and
 - C. Incentives, including tax benefits and transfer of development rights.
- Policy 13.7.10 The City has adopted and shall maintain a floodplain management ordinance that establishes engineering requirements to safeguard the public health, safety, and general welfare and minimizes public and private losses due to flooding through regulation and development of flood hazard areas. The ordinance shall include development and redevelopment regulations that:
- A. Minimize unnecessary disruption of commerce, access and public service during times of flooding;
 - B. Require the use of construction practices that will prevent or minimize future flood damage;
 - C. Manage filling, grading, dredging, mining, paving, excavation, drilling operations, storage of equipment or materials, and other development which may increase flood damage or erosion potential;
 - D. Manage the alteration of flood hazard areas, watercourses, and shorelines to minimize the impact of development on the natural and beneficial functions of the floodplain;

- E. Minimize damage to public and private facilities and utilities;
- F. Help maintain a stable tax base by providing for the sound use and development of flood hazard areas;
- G. Minimize the need for future expenditure of public funds for flood control projects and response to and recovery from flood events; and
- H. Meet the requirements of the National Flood Insurance Program for community participation as set forth in the Title 44 Code of Federal Regulations, Section 59.22.

Wetlands

Review of City data indicates the potential existence of wetlands on the subject site and as such, a wetlands survey has been provided by the City's GIS analysis that indicates the location, size, quality and functional value of all wetlands located within the boundaries of the application site. Based on the information noted below, the proposed amendment is consistent with the Conservation/Coastal Management Element (CCME) wetlands policies.

Wetlands Characteristics:

Approximate Size:	0.19 of an acre
General Location(s):	The wetlands are located along the western edge of the application site. The wetland area of the property is a small portion of a larger isolated wetland system located to the west.
Quality/Functional Value:	The wetland has a medium functional value for water filtration attenuation and flood water capacity due to its isolation, size and having an indirect impact on the City's waterways
Soil Types/ Characteristics:	(82) Pelham Fine Sand, depressional. The Pelham series are nearly level poorly drained soils formed in thick deposits of sandy and loamy marine sediments. They are located on flats. The soil is moderately permeable and moderately slowly permeable. The water table is generally located at a depth of 12 inches.
Wetland Category:	Category III
Consistency of Permitted Uses:	Category III Wetlands: All uses permitted subject to the limitations of CCME Policy 4.1.6 shown below – conservation uses permitted.
Environmental Resource Permit (ERP):	Not provided by the applicant and none exists according to the St. Johns River Water Management District web site.

Wetlands Impact: Remaining wetlands may be eliminated by development.

Associated Impacts: Flood Zone AE; AAA

Relevant Policies: CCME Policies 4.1.3 and 4.1.6

Conservation/Coastal Management Element

Policy 4.1.3

The following performance standards shall apply to all development, except public utilities and roadways, permitted within Category I, II, and III wetlands:

(a) Encroachment

Encroachment in Category I, II, or III wetlands is the least damaging and no practicable on-site alternative exists; and

(b) No net loss

Development is designed and located in such a manner that there is no net loss to the wetland functions including but not limited to:

- i the habitat of fish, wildlife and threatened or endangered species,
- ii the abundance and diversity of fish, wildlife and threatened or endangered species,
- iii the food sources of fish and wildlife including those which are threatened or endangered,
- iv the water quality of the wetland, and
- v the flood storage and flood conveyance capabilities of the wetland; and

(c) Floodplain protection

Buildings are built at an elevation of sufficient height to meet the designated flood zone standards as set forth by the Federal Emergency Management Agency. The design must be in conformance with Chapter 652 (Floodplain Regulations) of the Ordinance Code; and

(d) Stormwater quality

In the design and review of developments which will discharge stormwater into the Category I, II, or III wetlands the following performance standards shall be used to protect water quality:

- i Issuance of a Management and Storage of Surface Waters permit pursuant to Chapter 40C-4 or 40C-40, F.A.C. or a stormwater permit issued pursuant to Chapter 40C-42, F.A.C., provides assurances necessary for compliance with subsections (i) - (iv) above provided the stormwater management system is constructed in accordance with the permit; and

- ii Regular monitoring and maintenance program on an annual basis for the performance of stormwater treatment systems
- (e) Septic tanks
Septic tanks, drainfields and/or greywater systems are located outside the Category I, II, or III wetland area and not within 75 feet of the mean high water line of tidal bodies or within 75 feet of any wetland unless the Duval County Health Department grants a variance for a hardship case pursuant to the provisions of Section 381.0065, F.S. Where public utilities are available, development is required to connect to these facilities; and
- (f) Hydrology
The design of the fill shall include measures to maintain the wetlands hydrology of the site.

Policy 4.1.6

The permitted uses within Category III wetlands shall be limited to the following land uses and associated standards, provided such use is consistent with the Future Land Use Map series (FLUMs)

- (1) Any use not otherwise listed below, provided all of the basic requirements outlined in Policy 4.1.3 above are met:

- (a) Silvicultural uses, provided the following standards are met:

Best Management Practices: Silviculture

Such activities are conducted in compliance with the provisions of the "Silvicultural Best Management Practices Manual", as may be amended, published by the Florida Division of Forestry, Department of Agriculture and Consumer Services.

- (b) Agricultural uses, provided the following standards are met:

Best Management Practices: Agriculture

Such activities are to be in compliance with Chapter 40C-44, F.A.C.

- (2) Any use that can be shown to be clearly in the public interest, subject to the requirements of (a), (b), (d) and (f) as noted in the performance standards outlined in Policy 4.1.3 above.

PROCEDURAL COMPLIANCE

Upon site submittal of the sign posting affidavit and accompanying photos, the required notices of public hearing signs were posted on February 27, 2024. Nineteen (19) notices were mailed out to adjoining property owners informing them of the proposed land use change and pertinent public hearing and meeting dates.

The Citizen Information Meeting was held on March 4, 2024. One member of the public attended the meeting and was concerned about the prospect of the site being used for an Air B & B. Concerns were also raised about the proposed LDR encouraging adjacent property owners to increase the density allowed through the same process.

CONSISTENCY EVALUATION

Consistency with 2030 Comprehensive Plan Goals, Objectives and Policies

Future Land Use Element (FLUE)

Development Area

Suburban Area (SA): The SA is the third tier Development Area and generally corresponds with the urbanizing portions of the City in areas that have usually been developed after consolidation. Development should generally continue at low densities with medium density development at major corridor intersections and transit stations. Development at these locations should promote a compact and interconnected land development form and is therefore encouraged to employ urban development characteristics as defined in this Plan.

Goal 1	To ensure that the character and location of land uses optimize the combined potentials for economic benefit, enjoyment, wellness and protection of natural resources, while minimizing the threat to health, safety and welfare posed by hazards, nuisances, incompatible land uses and environmental degradation.
Objective 1.1	Ensure that the type, rate, and distribution of growth in the City results in compact and compatible land use patterns, an increasingly efficient urban service delivery system and discourages proliferation of urban sprawl through implementation of regulatory programs, intergovernmental coordination mechanisms, and public/private coordination.
Policy 1.1.7	Gradual transition of densities and intensities between land uses in conformance with the provisions of this element shall be achieved through zoning and development review process.
Policy 1.1.21	Rezoning and amendments to the Future Land Use Map series (FLUMs) shall include consideration of their potential to further the goal of meeting or exceeding the amount of land required to accommodate anticipated growth and the projected population and to allow for the operation of real estate markets to provide adequate

choices for permanent and seasonal residents and business with the intent that this balance of uses shall:

- A. Foster vibrant, viable communities and economic development opportunities;
- B. Address outdated development patterns; and/or
- C. Provide sufficient land for future uses that allow for the operation of real estate markets to provide adequate choices for permanent and seasonal residents and businesses and is not limited solely by the projected population.

The projected growth needs and population projections must be based on relevant and appropriate data which is collected pursuant to a professionally acceptable methodology. In considering the growth needs and the allocation of land, the City shall also evaluate land use need based on the characteristics and land development pattern of localized areas. Land use need identifiers include but may not be limited to, proximity to compatible uses, development scale, site limitations, and the likelihood of furthering growth management and mobility goals.

Policy 1.1.22 Future development orders, development permits and plan amendments shall maintain compact and compatible land use patterns, maintain an increasingly efficient urban service delivery system, and discourage urban sprawl as described in the Development Areas and the Plan Category Descriptions of the Operative Provisions.

Policy 1.2.8 Require new development and redevelopment in the Central Business District (CBD), Urban Priority Area (UPA), Urban Area (UA), and Suburban Area (SA) to be served by centralized wastewater collection and potable water distribution systems when centralized service is available to the site.

Development on sites located within the UPA, UA and SA are permitted where connections to centralized potable water and/or wastewater are not available subject to compliance the following provisions:

1. Single family/non-residential (estimated flows of 600 gpd or less) where the collection system of a regional utility company is not available through gravity service via a facility within a right-of-way or easement which abuts the property.

2. Non-residential (above 600 gpd) where the collection system of a regional utility company is not within 50 feet of the property.
3. Subdivision (non-residential and residential) where:
 - a. The collection system of a regional utility company is greater than 1/4 mile from the proposed subdivision.
 - b. Each lot is a minimum of ½ acre unsubmerged property.
 - c. Installation of dryline sewer systems shall be installed when programmed improvements are identified in the Capital Improvements Element which will make connections the JEA Collection Systems available within a five (5) year period.

Objective 3.1 Continue to maintain adequate land designated for residential uses which can accommodate the projected population and provide safe, decent, sanitary and affordable housing opportunities for residents. Protect single-family residential neighborhoods by requiring that any other land uses within single-family areas meet all applicable requirements described in the Development Areas and the Plan Category Descriptions of the Operative Provisions of the Comprehensive Plan and Land Development Regulations.

Property Rights Element

Goal 1 The City will recognize and respect judicially acknowledged and constitutionally protected private property rights in accordance with the Community Planning Act established in Chapter 163, Florida Statutes.

Objective 1.1 Local decision making shall be implemented and applied with sensitivity for private property rights and shall not be unduly restrictive.

Policy 1.1.1 The City will ensure that private property rights are considered in local decision making.

Policy 1.1.2 The following rights shall be considered in local decision making:

1. The right of a property owner to physically possess and control his or her interests in the property, including easements, leases, or mineral rights.
2. The right of a property owner to use, maintain, develop, and improve his or her property for personal use or for the use of any other person, subject to state law and local ordinances.
3. The right of the property owner to privacy and to exclude others from the property to protect the owner's possessions and property.

4. The right of a property owner to dispose of his or her property through sale or gift.

According to the Category Description within the Future Land Use Element (FLUE), Agriculture (AGR) in all of the Development Areas is intended to provide agricultural uses and to preserve the existing rural character of outlying areas of the City. Most AGR lands are located in the Rural Area of the City where full urban services and facilities will not be provided by the City during the planning timeframe. Accordingly, the principal activities allowed in these categories are agriculture and related uses, such as farming, horticulture, forestry and logging, storage, processing and wholesale distribution of farm supplies and products. The maximum gross density is 1 unit/ 2.5 acres.

According to the Future Land Use Element (FLUE), Low Density Residential (LDR) in the Suburban Area is intended to provide for low density residential development. Principal uses in the LDR land use category include, but are not limited to, single family and multi-family dwellings; commercial retail sales and service. The maximum gross density in the Suburban Area shall be seven (7) units/acre when full urban services are available to the site and there shall be no minimum density. The maximum gross density shall be 2 units per acre and the minimum lot size shall be 1/2 of an acre when both centralized potable water and wastewater services are not available. The maximum gross density shall be 4 units/acre and the minimum lot size shall be 1/4 of an acre if either one of centralized potable water or wastewater services are not available. According to the subject amendment application, the development will be utilizing well and septic.

The subject site is located west of Cranbrooke Road and South of Garden Street within the Suburban Development Area. A JEA availability letter dated December 13, 2023, is included in the companion rezoning application. According to the letter, there is an existing 16-inch water main abutting the property along Garden Street. However, there is not a JEA sewer main available for connection within a quarter mile of the application site. The applicant stated that there is an existing well onsite that would be utilized with the intention to use well and septic for the site. While the intent of the applicant is to allow for a second single-family home on the property providing consistency with FLUE Policy 1.2.8, residential development potential will be limited as provided for in the LDR land use category where centralized water and sewer is not available.

The amendment to LDR results in a compatible development pattern with residential land uses surrounding the property and existing LDR development directly to the north of the property across Garden Street. North of the site, across Garden Street, Ordinance 2006-478-E changed the land use from AGR to LDR on 75 acres; this site has been developed with single-family homes. Ordinance 2022-003-E changed the land use from AGR to LDR on a 71 acre site on the south side of Garden Street to the east at the intersection with Imeson Road. The intention of the applicant to develop a total of two single-family homes on the subject site is consistent with the density limitations of the LDR land use category and provides a compatible density with the immediate surrounding area on the south side of Garden Street in the AGR land use category. The proposed amendment to LDR would also allow for the development of an underutilized property for additional housing options

in the Northwest Planning District. The proposal adds to the total amount of LDR designated land for residential development needed to accommodate future growth through the planning timeframe of the 2045 Comprehensive Plan. Therefore, the amendment is consistent with FLUE Goal 1, Objective 1.1, Objective 3.1, and Policies 1.1.7, 1.1.21, 1.1.22.

The proposed amendment does not hinder the private property rights of the owner of record; has no impact on the right of the property owner to possess or control his or her interest in the property; maintains the owner's ability to use, maintain, develop and improve the property; protects the owner's right to privacy and security; and maintains the ability of the property owner to dispose of the property at their discretion. Therefore, the amendment is consistent with PRE Goal 1, Objective 1.1 and Policies 1.1.1 and 1.1.2.

Vision Plan

The subject property is located within the boundaries of the Northwest Jacksonville Vision Plan. The Northwest Planning District of Jacksonville embraces a variety of new growth opportunities from strengthening neighborhoods, protecting rural character and open space, focus on creating centers, establishing minimum standards, connecting centers, and maintaining the viability of airfield operations. The proposed amendment to LDR will support Theme 1: Strengthen existing neighborhoods and create new neighborhoods of the vision plan. With the addition of single-family homes, the housing stock in the city will continue to rise.

Strategic Regional Policy Plan

The proposed amendment is consistent with the following Goal of the Strategic Regional Policy Plan:

Goal: A safe, sanitary, efficient and resilient housing supply that provides lifestyle choice (agricultural, rural, suburban, and urban) and affordable options for all income, age and ability groups, equitably placed in vibrant, viable and accessible communities throughout the region.

The proposed land use amendment would increase opportunities for residential development, providing a wider range of housing in the northeast Florida region and create a location for the development of new housing stock for the area. Therefore, the proposed amendment is consistent with the Strategic Regional Policy Plan.
