**TREE COMMISSION  
APPROVED TREE PLANTING LIST**

Tree		Right of Way	Parks	<sup>14</sup> DCPS	Height/ Spread	<sup>1</sup> Plan Canopy Diameter	<sup>2</sup> Foliage	<sup>3</sup> Light Required	<sup>4</sup> Soil Drainage	<sup>5</sup> Drought Tolerance	<sup>6</sup> Growth Rate	Soil Tolerance (pH)	<sup>13</sup> IFAS FL Friendly
------	--	--------------	-------	--------------------	-------------------	---	----------------------	--------------------------------	-------------------------------	-----------------------------------	-----------------------------	---------------------------	-----------------------------------

**LEGEND:**

1 - Draw each tree symbol on the landscape plan to the diameter shown above to match the normal mature (20 year) canopy of each tree species. Do not overlap tree canopies of different species (ie, do not show the canopy circle of a sun loving crape myrtle overlapping the mature canopy circle of a live oak). However, tree canopy circles of the same species can overlap to create tree clusters or to create a solid, closely spaced row of trees. Also, new understory trees can be shown under existing shade trees if existing trees have high branching.

2 - Foliage: DECID = Deciduous, E'GRN = Evergreen

3 - Light Requirement: FS = Full Sun, PSH = Partial Shade (2-5 hrs. of sun or filtered sun), SH = Full Shade (<2 hrs. sun)

4 - Soil Drainage: W=Always Wet (soil saturated for more than several days during growing season), OW=occasionally Wet (Soil saturated for several days during several days of growing season), WD=Well Drained

5 - Drought Tolerance: HIGH=High (no watering required once well established), MOD= Moderate (occasional watering required during dry periods in growing season), LOW= Low (frequent watering required during dry periods of growing season)

6 - Growth Rate: SLOW=Slow (<1ft/ yr.), MOD=Moderate (1-2 ft/ yr.), FAST=Fast (>2ft/ yr.)

7 - Use Live Oak cultivars (Q. v. 'SDLN' ('Cathedral' Live Oak) or Q. v. 'QVTIA' ('Highrise' Live Oak)) in medians when a single row of oaks with uniform spacing is desired. Use 'Highrise' Oak where oaks are near overhead power lines. Use common live oak for informal groupings.

8 - Limit use of River Birch, Red Maple, and Weeping Willow to clusters around retention ponds and in areas of R.O.W. undisturbed by construction. Do not use in medians or within 20' of pavement. These trees don't do well in alkaline conditions generally found near pavement. Because River Birch and Willows have a short life span, use these tree sparingly. Generally, cluster with longer lived tree types.

9 - Use Wax Myrtle only in mass planting for visual screening and transition into natural areas.

10 - Provide 6'-8' minimum between Large Trees and pavement, curbs and other structures.

11 - Trees not on the above approved list may be considered for approval by the Tree Commission. ([www.coj.net/departments/public-works/tree-commission](http://www.coj.net/departments/public-works/tree-commission))

12 - Because of weeping nature of Drake Elm, limit use to medians 30' wide or greater, measured from the edge of travel lane (i.e. two 1.5' curb & gutter & 27' grassed median) and where the tree can be set back 15' from the travel lane, if planted on the side of the street.

13 - The definition of Florida-Friendly Landscaping™ in Florida Statutes section 373.185 (adopted in 2009 in Senate Bill 2080) addresses "quality landscapes that conserve water, protect the environment, are adaptable to local conditions, and are drought tolerant. The principles of such landscaping include planting the right plant in the right place, efficient watering, appropriate fertilization, mulching, attraction of wildlife, responsible

14 - DCPS=Duval County Public Schools. When landscaping on Public Educational Facilities in Florida (including colleges and universities), please refer to State Requirements for Educational Facilities manual for a comprehensive description of planting standards at [www.flrules.org](http://www.flrules.org).

15 - If planting area is likely contaminated with limerock or if the soil pH is tested above 7.5, then concentrate on trees shown in gray that are tolerant of alkaline soils.
